1. Brainstorming & Ideation Phase

The brainstorming and ideation phase was carried out to identify the challenges faced by individuals, students, freelancers, tenants, small business owners, and startups when they need everyday legal documents. The primary focus was to develop a simple and intelligent solution that helps anyone prepare a well-structured first draft of a legal document using Generative AI.

During brainstorming, several ideas were considered, including a template-based document generator, an AI drafting assistant that converts simple answers into formal legal language, a plain-language clause explainer, a missing-clause and risk checker, a library of document types, version history, and export to PDF and Word formats. The ideas were evaluated on usefulness, feasibility, ease of implementation, and relevance to the target users.

The main problem identified was that legal documents are expensive and difficult to prepare. Lawyers charge fees that small users cannot always afford, free templates are generic and hard to adapt, and legal language is difficult for non-experts to understand. Existing generic chatbots can write text but do not follow a structured process, do not collect the right details, and do not explain what each clause means. Based on these observations, the concept of "LegalEase: AI-Powered Legal Document Generator" was proposed. The application combines guided data collection, AI drafting using Google Gemini, clause explanation, document review, and export in a single platform.

Key Ideas Identified

- **Document Type Library:** the user chooses a document such as a non-disclosure agreement, rental agreement, freelance contract, employment offer letter, affidavit, or legal notice.
- **Guided Questionnaire:** a step-by-step form collects the parties, dates, amounts, terms, and jurisdiction, so the draft is built from accurate details.
- **AI Drafting:** Gemini converts the collected details into a complete, properly structured document with standard clauses.
- **Plain-Language Explanation:** any clause can be explained in simple words so users understand what they are agreeing to.
- **Review and Risk Check:** the draft is checked for missing clauses, vague wording, and one-sided terms, with suggestions for improvement.
- **Clause Editing and Regeneration:** users can edit text or regenerate a single clause without redoing the whole document.
- **Export:** finished documents are exported as PDF or Word files.
- **Document History:** saved drafts and versions are stored for later editing.

Final Ideation

After evaluating the ideas, the solution was finalized as LegalEase, an assistant that goes beyond a simple text generator by providing a complete collect, draft, explain, review, and export workflow. LegalEase produces drafts for information and convenience and is not a substitute for a qualified lawyer; this is clearly stated in the application. The overall concept can be represented as:

User Choice of Document and Details -> Backend Processing -> Gemini Model (Draft, Explanation, Review) -> Editable Document -> Export (PDF / Word)

Thus, the ideation phase established the core objectives, major features, target users, and overall direction of the LegalEase project.
